Crimping Line

Micrograph laboratory **Microlab ML 3700-pc**

Tabletop laboratory with integrated mini PC for making cross-section analysis

With the Microlab you can prepare microsections of crimped contacts in a very professional and comfortable manner.

The Microlab product family is designed to prepare cross sections of conductor crimps and insulation crimps easily and comfortably within a few minutes. After cutting, polishing and etching of the sample, the image of the cross section can be visualized on the screen. Now a comprehensive quality check of the crimp can be performed by using the special designed image processing software X-Scan.

Equipped with a high quality 12x zoom objective the **Microlab ML 3700-pc** is the ideal tool to conduct quality tests quick and comfortable. The high resolution camera delivers first-class microsections which can be easily measured with the automatic function of the image processing software **X-Scan**. Automatically generated records can be used as proofs of quality. Of course, X-Scan fulfills all relevant DIN standards and OEM specifications.
